Portal plugin - mobile version specs v2

☑ **SGC-777** - 65. Evolution - add a different design for mobile version of portal widget (set via a URL parameter, no mobile detection)
TO SEND TO 3RD PARTY

Full specifications

1. **General Architecture**
   a. a mobile version of the portal widget - It will be used on the mobile version of the intranet portal
   b. how desktop or mobile version is determined :
      i. the calling URL for the widget is the same (no additional parameter added by the portal), so you must reuse the "**mobile detection**" function of Mobile View plugin to determine which version is displayed (based on the user agent)
   c. performance : being the mobile version, it must be quicker and lighter than the normal portal version
      i. currently the /portal widget is very long to display in production : so very strong architecture efforts are to made to tackle this issue and **reach a 3s display time**
2. **General design**
   a. Fixed size for this whole widget (must never change, even if the contents are longer : see how the wall posts are displayed, their contents must always be cut off if longer than the allowed length for each display field.
   b. Fixed size : 375 px wide, 564px high
   c. This portlet will never display any scollbar (horizontal or vertical).

3. **Contents of the widget :**
   a. Like the current portal widget, keep the user's photo & "Hello <name>"
   b. Only one button to go to SG Communities
      i. contains only one number for the notifications (adds up all the unread notifications, messages, contact requests)
      ii. the button goes directly to the home of SG Communities (no direct link to the notifications)
   c. Remove the grey border on the "what's new" bar, to look like the design above
   d. When the users clicks (or "taps") the what's new bar to post a message :
      i. the "share" button (to post the message) and the lock (to choose where to post it) will be displayed below the what's new, but "**above**" the bottom part of the widget (above the filters) **without enlarging the widget and without moving the items that are below down**
   e. the filters "+ recent" & "my network" must be displayed as easy to use tabs
   f. the posts below are displayed like a "carousel" :
      i. 2 posts are displayed at any time (never more, their height are completely fixed)
      ii. small grey line separates 1st and 2nd post displayed (on each page)
      iii. 5 "pages", displayed as grey dots below (current page's dot is red)
      iv. the user can move horizontally between these pages by "swiping" (with the finger) between them
      v. allow to move from last page to first and first to last (allow full cycle)
      vi. also allow click on page dots below to switch to a page directly (even if the dots are not easy to tap with a finger on a small mobile)
4. **How posts are displayed :**
   a. thumbnail for user,
   b. bold user name and bold for the location where the post was posted (group, etc. if that is the case)
   c. each post has an exact fixed height : 212 px
   d. following the type of the post :

i. if text only : in normal font (not bold), display only the first 140 characters of the post. If any longer, cut it (any where even mid word) and show "[...]"
ii. if the post contains an image : display it by fitting it in the available space (must keep proportions and a small margin)
iii. **if the post has text + image : TDB**
iv. **if the post has a link : TDB**
v. **if the post has text + link : TDB**
vi. **if the post is a "shared page" (from adv wall's function or sharer plugin's share function) : TDB**
vii. **others ❓ TBD**

e. below the post, some common elements :
i. symbol for the type of post (link, text, image...),
ii. date or "time ago" (like "5 minutes ago")
iii. number of likes (number + heart icon provided)
iv. number of comments (number + comment icon provided)

f. the **whole post area** is clickable (as if it was a single image) and goes to the post on the mobile site SG Communities.

5. **Design**
a. please look at the picture below detailing the fonts, etc. to be used for this version
